

The Effects of STRESS on your Body

SKIN: pales as blood diverted to vital organs.

HEART: begins to pound, sending blood around body carrying sugar (energy) and hormones (eg. adrenalin)

SKIN: less blood supply can lead to diseases developing.

HEART: racing heartbeat and high blood pressure can lead to strokes or heart attacks.

PRIMARY STRESS RESPONSE

IMMEDIATE & URGENT RESPONSE to SERIOUS THREAT

MUSCLES: tense in readiness for action.

LUNGS: air passage dilates, breathing more intense to provide more oxygen to feed increase blood supply.

LIVER: glycogen converted to blood sugar to give 'short distance' energy.

BLOOD: thickens to help it carry more oxygen, fight infection & stop bleeding

SWEAT GLANDS: start up to cool the underlying and overheated muscles.

DIGESTION: processes shut down as blood diverted elsewhere. Mouth goes dry to avoid adding extra fluids to
